

Assignment-1

SDLC

1. Requirements :

- Description: Gathering and analyzing what the software needs to achieve.
- Importance: Establishes a clear understanding of user needs and project goals.
- Interconnection: sets the foundation for all subsequent phases.

2. Design: Creating the architecture and design of the software.

Importance: Translates requirements into a blue print, ensuring functionality and usability.

Interconnection:- Guides the implementation phase ensuring alignment with requirements.

3. Implementation:-

- Description: Actual coding and development of the software.
- Importance:- Converts design into a working product, bringing ideas to life.
- Interconnection:- Relies on the design phase to ensure correct development practices.

4. Testing :- Description:- Evaluating the software for defects and ensuring it meet requirement.

- Importance:- Identifies issues before deployment, ensuring quality & reliability.
- Interconnection:- feedback from testing may lead to revisions in earlier phases.

5. Deployment:- Releasing the software to users & stakeholders.

- Importance:- Marks the transition from development to real world use.
- Interconnection:- May require ongoing support and updates based on user feedback.
