

Home Network Topology

- Topology Used : star Topology
- Devices in the network :
 - Modem - Connects the home to the internet via the ISP.
 - Wireless Router - Distributed internet access to all connected devices.
 - MacBook - Connects via wifi.
 - iPhone - Connected via wifi.
 - Smart TV - Connected via wifi.
 - Desktop PC - Connected via ethernet Cable.
- All data flows through the wireless router.
 - When a device (e.g. MacBook) wants to access a website, it sends a request to the router.
 - The router passes the request to Modem, which sends it to the internet.
 - The response comes back in same way.

- Advantage

- Easy to set up & manage
- Centralized Control
- Adding or removing devices Simple.
- wireless allows mobility & flexibility,
- wired devices got stable & fast connection.

- Limitations:-

- The entire network depends on router, if it fails, the network is down.
- wireless signal may weaken due to distance or interference.
